This book deals with the factors that underlie the development of psychic dependence. An attempt is made to define or redefine the concept of psychic dependence. The social consequences of the abuse of psychic dependence-producing drugs are discussed with special reference to the risk to public health.

One of the main topics examined is the discussion concerning the value of animal models for the prediction of the psychic dependence-producing capacity of drugs in man. Further, the methods of clinical pharmacology as applied to the assessment of abuse potential in man are described and considered with due regard to the ethical and legal implications of clinical trials of this kind.
